Abdelmadjid Menad

Age 23 | Mostaganem, Algeria | +213 559 893 686 | menad00madjid@gmail.com | LinkedIn

Profile

State Engineer in Computer Science specialized in Cybersecurity, and holder of a Master's degree in Cybersecurity, with expertise in systems and network security, network administration, SIEM/SOC, IDS/IPS, IoT security, software development and programming. Passionate about protecting IT infrastructures and preventing cyberattacks.

Education

State Engineer in Computer Science, Cybersecurity specialization Sept. 2021 – June 2026
ESTIN – Graduate School of Computer Science and Digital Technologies, Amizour Campus *Béjaïa*

- Systems and network security, network administration, information systems, programming, software development, artificial intelligence, Machine Learning, computer networks, IoT security.

Academic Master's Degree in Cybersecurity Sept. 2021 – June 2026
ESTIN – Graduate School of Computer Science and Digital Technologies, Amizour Campus *Béjaïa*

- Research and development in cybersecurity, artificial intelligence, Machine Learning, cyber threat analysis and detection, design of innovative solutions for systems and network security.

Baccalaureate in Mathematics, Very Good distinction (16.55/20) 2021
Hammou Othmane Kheir Eddine High School

Professional Experience

Cybersecurity Internship Feb. 2026 – June 2026
EPM (Mostaganem Port Authority) *Mostaganem*

- Designed and deployed a SIEM-based monitoring and threat detection solution integrating Wazuh, Suricata and ELK.
- Collected, centralized and correlated security logs, monitored events, detected incidents and analyzed alerts to strengthen the security of the port infrastructure's systems and networks.

Observation Internship July 2025
Sonelgaz *Mostaganem*

- Discovery of the professional environment and of IT and industrial infrastructures, with an introduction to networks, SCADA systems and cybersecurity principles applied to critical infrastructures.

Security Analysis Internship March 2024
EPM (Mostaganem Port Authority) *Mostaganem*

- Analyzed IT security and network infrastructure, identified risks and vulnerabilities, and studied protection measures and cybersecurity best practices suited to the port environment.

Observation Internship Dec. 2023
Algérie Télécom *Mostaganem*

- Discovery of the professional environment and of telecommunications infrastructures, with an introduction to computer networks, communication systems, network administration and technologies used in telecom infrastructures.

Projects

Network Equipment Monitoring – Availability, Performance and Alerts 2025

- Set up a monitoring solution for network equipment (routers, switches, firewalls) to track availability and performance.
- Configured alerts to quickly detect outages and abnormal behavior.

ExtShield – Static Security Analyzer for Browser Extensions 2025

- Developed a tool that automatically analyzes the source code of Chrome, Firefox and Edge extensions to identify dangerous behaviors.
- Detection of excessive permissions and sensitive accesses; analysis of calls to the `cookies`, `history`, `tabs` and `webRequest` APIs.
- Identification of remote script downloads and suspicious network communications.
- Generation of a report justifying each alert with the file and line concerned.
- *Technologies:* Python, JavaScript AST, Babel / Tree-sitter, FastAPI.

ExplainExt – Explainable AI for Malicious Extension Detection 2025

- Designed a classification model that distinguishes legitimate extensions from potentially malicious ones, without relying solely on the name or declared permissions.
- Extraction of features from JavaScript code and the `manifest.json` file; comparison of Random Forest, XGBoost and LightGBM.
- Prediction explanations with SHAP; evaluation of false positives/negatives, precision, recall and F1-score.
- *Technologies:* Python, scikit-learn, LightGBM, SHAP, pandas.

Controlix AI – IT/OT Security Operations Center (SOC) Platform 2026

- Designed a SOC platform deployed on the client's premises: real collection of Suricata, Wazuh and Syslog logs (Linux servers, FortiGate), event normalization and detection through 13 editable YAML rules.
- Correlation of alerts from multiple sensors into incidents, explainable risk score from 0 to 100 and MITRE ATT&CK mapping (697 techniques and sub-techniques).
- Anomaly detection AI module (Isolation Forest) that learns each machine's normal behavior and explains every detected deviation.
- *Technologies:* FastAPI, Next.js, PostgreSQL, Redis, OpenSearch, Docker Compose, Python.

ExtTrace – Dynamic Analysis and Privacy Leakage Detection 2026

- Built an isolated lab to observe the behavior of an extension at runtime.
- Observation of HTTP(S) requests and contacted domains; detection of unusual data transfers and accesses to sensitive information.
- Correlation of browser events with extension actions and comparison with static analysis results.
- *Technologies:* Playwright, Chromium, Python, lab proxy, Docker.

ELK Stack Deployment in a Home Lab – Log Centralization and Analysis 2026

- Installed and configured the ELK stack (Elasticsearch, Logstash, Kibana) in a home lab environment.
- Log collection and centralization, event indexing and search, creation of Kibana dashboards for monitoring and analysis.

Technical Skills

Cybersecurity: Web application security, threat analysis, malicious activity detection, data security and privacy
Application Security Analysis: Static code analysis, AST, dynamic analysis, suspicious behavior detection, sensitive data flow analysis
Web & Browser Security: JavaScript, browser extension architecture, permissions, browser APIs, data leakage risks
Programming & Scripting: Python, JavaScript, TypeScript, Java, C
Machine Learning & Explainable AI: Classification, anomaly detection, feature engineering, model evaluation, SHAP
Data Analysis: Data extraction, preprocessing and analysis, pandas, NumPy, scikit-learn
SIEM & Threat Detection: Wazuh, ELK, log correlation, SOC monitoring, MITRE ATT&CK
IDS/IPS & Network Analysis: Suricata, Snort, Zeek, Wireshark, network traffic analysis
Networks & Systems: TCP/IP, DNS, DHCP, VLAN, VPN, firewalls, Linux administration, infrastructure hardening
Web Development: React.js, Next.js, REST APIs, frontend development fundamentals

Languages

Arabic: native **French:** very good **English:** very good
